Copy Scaling with Physical Interpretation ($d = 8$)
Combined noise: dephasing + depolarizing + amp. damping
Coherence maximization
Channel inversion
$\propto l^{-0.03}$
$\propto l^{-0.11}$
Statistical averaging: $O(n^{-1/2})$
Tomographic limit: $O(n^{-1})$
Infidelity $1 - F_{rec}$
Number of noisy copies n
10^0
10^1
10^2
10^{-1}
10^{-2}
